

Special features

Our headsets are the result of extensive research and come with special features designed to meet the rigors of a professional communications environment. They make life so much easier!

Smart Cabling

Sennheiser Communications provides a smart, flexible and future-proof universal headset solution. The *Easy Disconnect* system allows the headset to be connected to or disconnected from the bottom cable quickly and easily.

The *Smart Cable* system allows the headset to plug into nearly any source of communication!

If you upgrade the telephone system, simply use the correct headset cable. You only need to change the bottom cable - not the headset itself. Changeouts and implementation made E-Z.

Special features

UI 700-series

For even greater comfort and ease of use connect the headset via one of the Universal Switch Interfaces (UI). All interfaces offer convenient switching between headsets and other communication equipment.

Simple
clear
communication

The new UI 760 *Sound Clarity System™* is ideal for using a headset. The interface effectively filters out background noise and at the same time enhances the caller's voice.

If you wish to integrate a PC into the system, you can easily switch back and forth between your telephone and your PC.

BW-series

Business Class wireless office headset: the innovative BW 900 solution – first with intelligent sound quality, 300 ft. range, unlimited talk-time and simple call management

ActiveGuard™

An active guard
for your
hearing

During the course of a day, headset users may be exposed to hazardous incoming noises that can be dangerous to their hearing. A sudden high-volume acoustic burst can be more than frightening – it can actually cause irreversible damage and pain.

To safeguard users from these imminent dangers, all Sennheiser Communications telecom headsets are equipped with innovative ActiveGuard™ technology – a safety feature unique to Sennheiser Communications.

ActiveGuard™
